The air filter C 26 024 KIT – now with housing cover!

As of now, the air filter C 26 024 is available with housing cover. Therewith the C 26 024 KIT replaces the previous air filter C 26 024 for DAF applications.

What is new at the C 26 024 KIT?

Contrary to the previously used air filter element C 26 024, the C 26 024 KIT consists of the element and a suitable housing cover.

The cover for the air filter C 26 024 KIT eludes an installation protection against competitor parts. This installation protection was patented by the OE supplier. The outstanding thing about the cover is the geometry, which is especially aligned to the filter and ensures the performance in each application.

Of course, the optimized cover can be used with the original part.

Despite the delivery as a kit, no additional costs are incurred – the whole kit costs as much as the single filter element.
