

## VAUXHALL GEARBOX IDENTIFICATION

The question often arises as to how to identify the gearbox types on Vauxhall / Opel vehicles in order to correctly identify the correct clutch and CSC applications, as there is no means of identifying the gearbox type using the VIN number.

The primary problem is identifying the difference between the F13/17/18 versus the F23 gearbox .

The following information should help provide an accurate means of identification.

### F13 / F17 / F18 Gearbox

- Reverse gear selection is **away** from the driver
- Gearchange is operated via **rods**
- The gearbox type is indicated on top of the casing

### F23 Gearbox

- Reverse gear selection is **towards** the driver
- Gearchange is operated via **cables**
- The gearbox type is indicated on top of the casing

Always check the latest catalogue information to select the correct components.
