

Gasket set for differential

to fit DAF 75CF, 85CF, 95XF, CF75, CF75 IV, CF85, CF85 IV, XF95, LF55 IV, LF E6, XF E6

If the rear axle differential fails, the engine's power can no longer be transmitted to the wheels. To avoid this case, oil leaks on the differential should be repaired as quickly as possible. Since a leak on this component can lead to total failure because of oil loss and the resulting lack of lubrication.

Attention!

According to the manufacturer, the nut must not be reused and be renewed after removal!

febi bilstein offers this complete set for the sealing of the prop shaft flange at the rear axle differential in the usual high quality

- Long life: Sealing material FPM
- High performances in temperature: -30°C to +250°C
- Easy installation and smooth operation from the first revolution due to pre-greased sealing lip

febi no. 45058

Gasket set

to fit

DAF 0641 320 S1

The set parts are also available separately:

febi no. 29782

to fit
DAF 1739 947

Shaft seal
