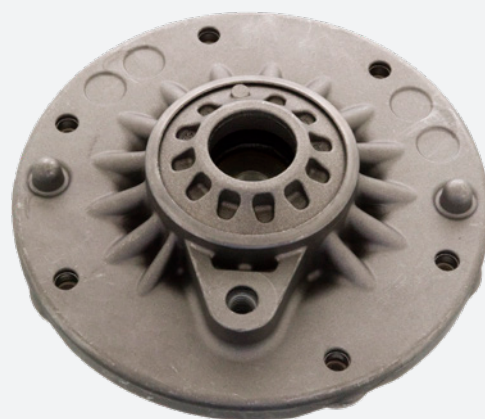

Figure 2 - febi 102532: 6-hole M8

Strut mounting with friction bearing

Attention!

Check which version of the strut mounting and thread size is fitted to the vehicle before replacing!

In the case of the F2x and F3x models up to model year 05/2013:

If the strut mounting with a M8 thread is fitted, the strut mountings must be replaced in pairs by using two strut mounting kits (104871) with the M10 thread. This includes all fixings, suspension- strut buffer and dust cover.

The changeover of thread M8 to M10 results in a different level of stiffness. Therefore, a mixed installation of mountings (M8/M10) is not permitted!

If the strut mountings have already been replaced once with the M10 thread mounting, the installation of an individual strut mounting is permissible.
