

Solution

Crankshaft gear wheel
SWAG 30 94 0113

Fits: 1.4 TDI engines for various models by Audi, Seat, Skoda and VW

SWAG 99 13 2266

SWAG 30 94 3667

Cost-effective repair solutions!

In 1.4 TDI 3-cylinder engines by VW, the balancer shaft and the oil pump are mounted on the ladder-type frame and are driven by a chain from the crankshaft. The components of the balancer shaft drive are susceptible to wear due to high loads and this can be made even worse by a challenging driving style and exceeding the oil change intervals. In the worst case, the chain may break, resulting in serious engine damage.

Note!

The crankshaft gearwheel is not available separately from the manufacturer. It can only be ordered with the crankshaft which makes the repair expensive.

SWAG offers a unique repair solution for the aftermarket!

Other components of the balancer shaft drive are also frequently affected by wear. For this reason, SWAG offers two repair kits: SWAG 99 13 2266 without

and SWAG 30 94 3667 with crankshaft gearwheel. This combination enables a professional repair and avoids potential complaints. That saves time and money for both workshop and customer!
