

STEER.

POWER STEERING RESERVOIR FILTER CHECK PUMPS - HP1817, HP1818, HP1962, HP1963, HP1723

Inspection of Reservoir Filter

There is a mesh filter located at the bottom of the PAS fluid reservoir which you will need to inspect. If the mesh filter is blocked this could result in damage / failure to other parts of the power steering system.

Failure to inspect the filter will affect any warranty / labour claims.

Shaftec do not supply either the filter or the reservoir. We advise that you buy these parts direct from the main dealer.
